PROFILE

Senior PM with 8+ years building integration, workflow automation, and data infrastructure products across HR, benefits, and SaaS platforms. More recently, I've designed and operated production AI systems spanning speech recognition, speaker diarization, HITL review workflows, and distributed inference architectures. Looking for roles where product ownership and technical depth are equally important.

SKILLS

AI / ML: ASR, Speaker Diarization, Persona Modeling, Human-in-the-Loop (HITL) Pipelines, PyTorch, MLX, Empirical Evaluation, Failure Mode Analysis, Training Data Quality

Systems: Distributed Inference (Mac + PC + GPU hybrid), Streaming Audio (PCM), FastAPI, Tailscale, Structured Logging, GPU Power Monitoring, venv Orchestration

Full Stack: Python, Swift / SwiftUI, React, Node, Supabase, REST APIs, Streamlit, WebSockets

Product: 0→1 Development, API & Systems Design, Roadmapping, Cross-functional Execution, Backlog Management, Operator/Developer Workflows

EXPERIENCE

ALL-LLM POD 06/2025 – Present

Creator — Multimodal AI Chat Platform · Berkeley, CA

- Designed and built a production ML pipeline processing 530+ episodes of **All-In Podcast** audio into speaker-labeled training data using WhisperX (ASR), NeMo (diarization + speaker classification), and custom HITL tooling — catching ghost audio, speaker collapse, and misattributed speech before they reach training data.
- Diagnosed a critical silent failure in the ASR decoder corrupting speaker-labeled data at scale; traced root cause to beam search + timestamp token interaction, shipped a hybrid recovery pipeline, and quantified compute tradeoffs.
- Built a thin multimodal iOS client running AI personas over a distributed inference backend (MLX, GPU, FastAPI, Tailscale) with live telemetry and streaming TTS/ASR — demonstrating end-to-end AI system architecture from model inference to production observability.
- Built a self-service internal data tools platform enabling operators to detect, audit, and remediate data quality errors in transcripts — with per-segment playback, re-labeling, and surgical repair — reducing a manual QA process to a fast, fully auditable workflow.

SLOPUME.dev 03/2026 – Present

Creator — AI-Powered Job Search Platform · Berkeley, CA

- Built an AI-native job search platform keeping the operator in full control: a human-in-the-loop resume rewriting engine where AI proposes per-bullet rewrites and the user accepts, rejects, or iterates — no black-box output, no loss of authentic voice.
- Designed job discovery and prioritization system scoring opportunities by role fit, company tier, and AI-market relevance — compressing hours of manual screening into an actionable shortlist.
- Owned full-stack delivery: FastAPI backend, React frontend, Supabase DB, multi-source data ingestion (Greenhouse, Lever, Ashby ATS), and Claude-powered keyword extraction — shipping end-to-end without eng dependency.

Blissfully 09/2021 – 03/2022

Technical Product Manager, B2B Integrations · New York, NY (remote)

- Owned 0→1 integration strategy for B2B SaaS connectors — defined API schemas, compatibility layers, and developer sandbox requirements before the engineering team was formed.
- Authored PRDs and technical specs establishing system boundaries, data contracts, and execution roadmap from first principles.
- Led nearshore team of 3 engineers to ship multiple integrations in 8 weeks; contributed to pre-acquisition product readiness.

Ease 03/2020 – 04/2021

Product Manager, Integrations · San Francisco, CA

- Owned end-to-end health insurance integrations (0→1 → scale) for an HRIS platform serving 70K+ SMBs and 2M+ end users — built core infrastructure for carrier connectivity.
- Led 8-engineer team; automated audit workflows for a 10-person ops team, cutting weekly task volume 93% and eliminating a 3-month backlog.
- Launched 5 carrier integrations in 90 days, adding 300K+ end users and ~\$2M projected ARR.

Zenefits 09/2015 – 02/2019

Sr. Product Operations Specialist (promoted 2x: Analyst → Specialist → Sr. Specialist) · San Francisco, CA

- Designed and launched the Universal Enrollment File (UEF) — a unified data layer enabling interoperability across carrier formats, powering 43% of enrollment workflows.
- Automated 74% of Open Enrollment processing within 5 months; reduced enrollment error rates from 8% to <1% via carrier integrations and multi-tenant portal improvements.
- Built and scaled a Google Sheets-based bug tracking and triage system during a major React migration, cutting reported bugs 80% and improving visibility for 100+ offshore ops staff.
- Led real-time iframe enrollment integration (Unum) enabling instant decisioning without direct handling of sensitive PHI.

EDUCATION & CERTIFICATIONS

University of California, Berkeley — B.A. Molecular & Cell Biology, Concentration in Biochemistry & Molecular Biology

NVIDIA — Generative AI & LLM Associate Certification, February 2026
